

Pacific Northwest 7 Day Significant Fire Potential

Wednesday, 3/9/2022

Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a <u>normal</u> risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Weather: Light precipitation, currently along Oregon's northern border, will shift south and diminish as a cold front continues its trek across the region. Colder temperatures will move in behind the front. Gusty winds will take on a more northerly orientation today into tomorrow morning east of the Cascades. Mostly dry and calmer conditions return Thursday with temperatures warming into the weekend. A series of wetter weather systems move in from the Pacific over the weekend and into next week bringing bouts of precipitation and wind.

Check your NWS forecasts for local details including winds and snow levels.

Fire Potential: The potential for new significant fires remains very low across the geographic area.

Preparedness Level:

Northwest: 1
National: 1
